# Farm and Estate Installations

T H White has been serving the agricultural community since 1832 and today has grown to become one of the UK's leading suppliers of agricultural and industrial equipment. The Handling & Storage Division is now the UK's largest independent specialist in the design and construction of facilities for agricultural grain storage, malting, animal feed and food industries.

Although T H White regularly undertakes large scale commercial projects, smaller-scale agricultural and farm installations remain at the heart of our business.

Our strong reputation is based upon developing a thorough understanding of our clients' objectives and then applying an innovative approach to deliver the most efficient and cost-effective solutions.

We offer completely independent and unbiased advice on plant and equipment selection as well as full engineering design, project management and construction – providing the complete design and build package from concept to completion, whatever the size of the project.

No matter what the challenges, T H White's expertise will deliver a competitively-priced solution finished to the highest standards. So, whether you are looking for a silo, a flat store, on-floor drying systems, a dryer or even a reconditioned item of second hand equipment to fit an existing space, T H White can provide exactly what you need.

All the projects we undertake benefit from significant in-house expertise and an impressive CAD design facility. This helps to ensure that any potential difficulties are addressed before the fabrication and construction stages, helping to keep costs to a minimum.

Steelwork is fabricated in our own workshops at Devizes where a quality inspection system ensures that we can minimise the risk of delays later on site. Typically, packages will include engineering design and project management; plant installation and commissioning; steel fabrication and site erection; after sales service and breakdown support.

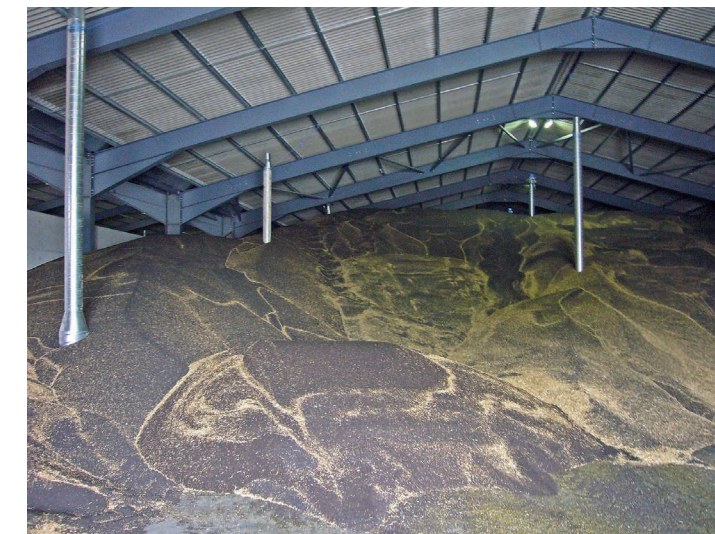

## Typical projects

- Steel framed buildings and sheds, including grain stores, machinery and general purpose buildings
- Flat and hopper-bottomed bottomed grain silos, hopper bins, and bulk out loading hoppers
- Grain driers, grain cleaners, colour sorters and other grain processing equipment
- Chain and flight conveyors, belt conveyors, belt and bucket elevators, and screw augers
- Silo dischargers and sweep augers
- Dust extraction equipment, fans, filtration, ductwork and silencing equipment
- Structural steelwork and access platforms, either galvanised or painted finish
- Grain ducting, a complete range of fittings including hand operated, motorised, or electro-pneumatic valves and slides
- Diesel or Kerosene dryer burners, bunded fuel tanks, and gas burner systems
- Electrical control panels and wiring installations utilising the latest technology
- Groundworks, either as part of our package, or in partnership with your preferred civil works contractor

From the earliest conception of the idea, it is advisable to enlist the help of a specialist, and this is where T H White will work with you through the process.

We are able to offer a comprehensive package of assistance at every step through the development process of your project, including the selection of a suitable site, assisting in the feasibility and planning process and developing a specification. We will be with you all the way to completion. We have a team of engineers who carry a wealth of knowledge and experience, well versed in the processes of the construction industry but with a particular sympathy for the design and development of grain and storage installations.

All our installations are carried out using T H White's highly trained staff and each project is fully compliant with all current construction regulations.

# After Sales

Once we have undertaken an installation for you we offer a range of services that will help to prolong the life of your systems and achieve the best pay-back. At the heart of this is a programme of planned servicing and maintenance.

## Planned Maintenance

A regular maintenance regime is important to ensure your plant continues to function efficiently and reliably with the minimum of down time. By planning a preventative maintenance schedule with you we can carry out work at mutually convenient times to suit your operational requirements. It doesn't matter who built your plant originally as we are always happy to inspect any grain plant and put in place a preventative maintenance plan in line with these recommendations and your cashflow requirements.

## Winter Servicing Discounts

By carrying out servicing at times when we are less busy – particularly during the winter months – we are able to offer a stepped range of discounts. Our winter servicing programme usually runs from October to February, with the highest discounts being available to those who book early. Call us on 01380 723040 to book a winter service.

## Repairs and Upgrades

Whatever type of storage and handling system you are operating we would be pleased to quote for repairs, upgrades and improvements of any size. Working with our customers to optimise their grain plants and make the most of their existing facilities is a frequent undertaking by our experienced team.

## Breakdown and Emergency Call-out

We provide a comprehensive breakdown and emergency call out service for any grain storage and drying plant and run a full 24/7 service for farmers during the harvest season. We are able to source parts to suit equipment from most manufacturers and carry a stock of common spare parts ready for immediate despatch. We offer our call out service to new and existing customers alike, and always aim to provide an immediate response.

## Safe Access Platforms

Safe access platforms are essential for compliance with the latest health and safety legislation when members of your workforce are operating at heights. T H White designs and builds bespoke safe access platforms to suit any situation, whether these are to be fitted in existing or new plants.

## Spare Parts

T H White holds an extensive range of spare parts for most applications within handling and storage facilities. When a required item is not in stock we can usually source it for you on a priority basis in order to get you plant up and running again as quickly as possible.
