

# DUST SUPPRESSION HOPPER

## Product Application - Container & Store filling

The loading of containers or bulk filling stores frequently presents the problem of dust creation within the process and being faced with a difficult operating environment.

Addressing the situation by using a Dust Suppression Hopper connected onto the feeding conveyor loading spout or conveyor outlet will make a significant difference by containing the dust within the column of material as it leaves the outlet.

Grain into containers through hopper

**Less dust, more  
visibility, safer  
operation**
