

DUST SUPPRESSION HOPPER

Product Application - Truck Loading (1)

The loading of trucks or trains with free flowing bulk materials can result in an unpleasant dust cloud being created between the discharge and point of vessel collection.

Using a Dust Suppression Hopper can make the difference and effectively minimise the airborne dust into the atmosphere by simply fitting it onto the loading chute or outlet from a silo or handling system within the operating process.

Loading through telescopic

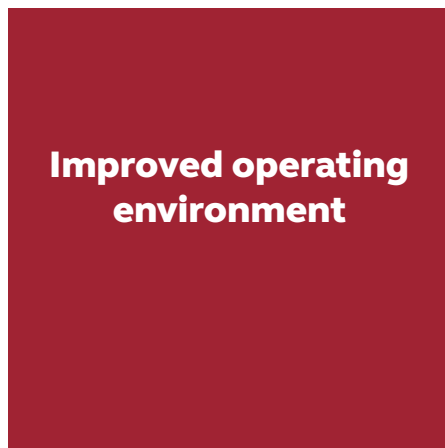

Loading with hopper connected to telescopic

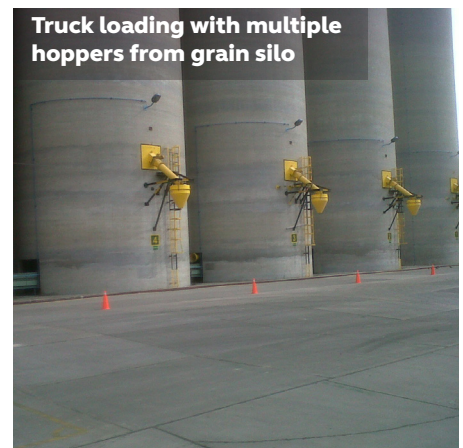

Tandem hoppers loading truck

Fertiliser loading without hopper

Improved operating environment

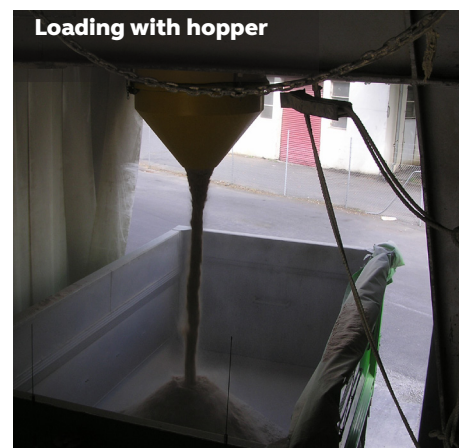

Truck loading with multiple hoppers from grain silo

Fertiliser loading with hopper

Dust creation without hopper

Loading with hopper
