

DUST SUPPRESSION HOPPER

Product Application - Stockpiling /loading minerals

Activities within the minerals & quarrying sector involving the stockpiling or loading of free flowing bulk materials into trucks or trains normally results in the creation of dust as it travels within the process and into its loading destination.

By fitting a Dust Suppression Hopper at the loading point where the material is discharged can make a significant difference to the created dust levels and operating environment.

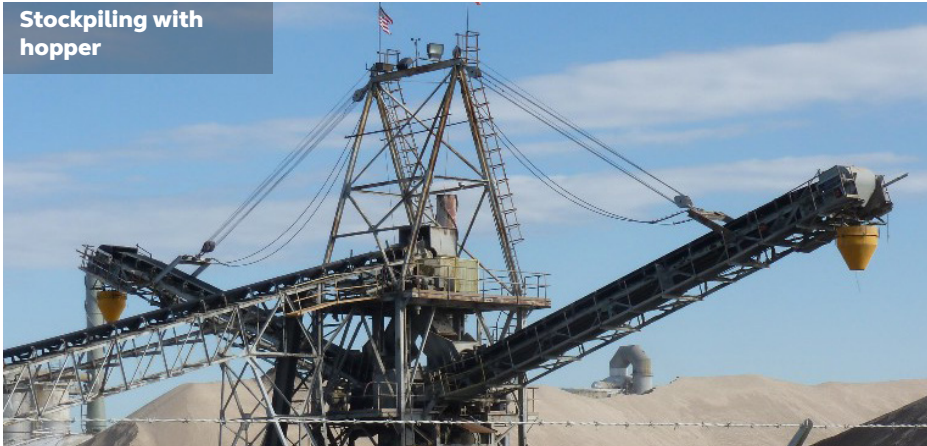

Stockpiling with hopper

Less dust,
more visibility

Clean and safer
environment

Stockpiling with hopper

Loading limestone without hopper
